SPINE OS

Install Spine OS

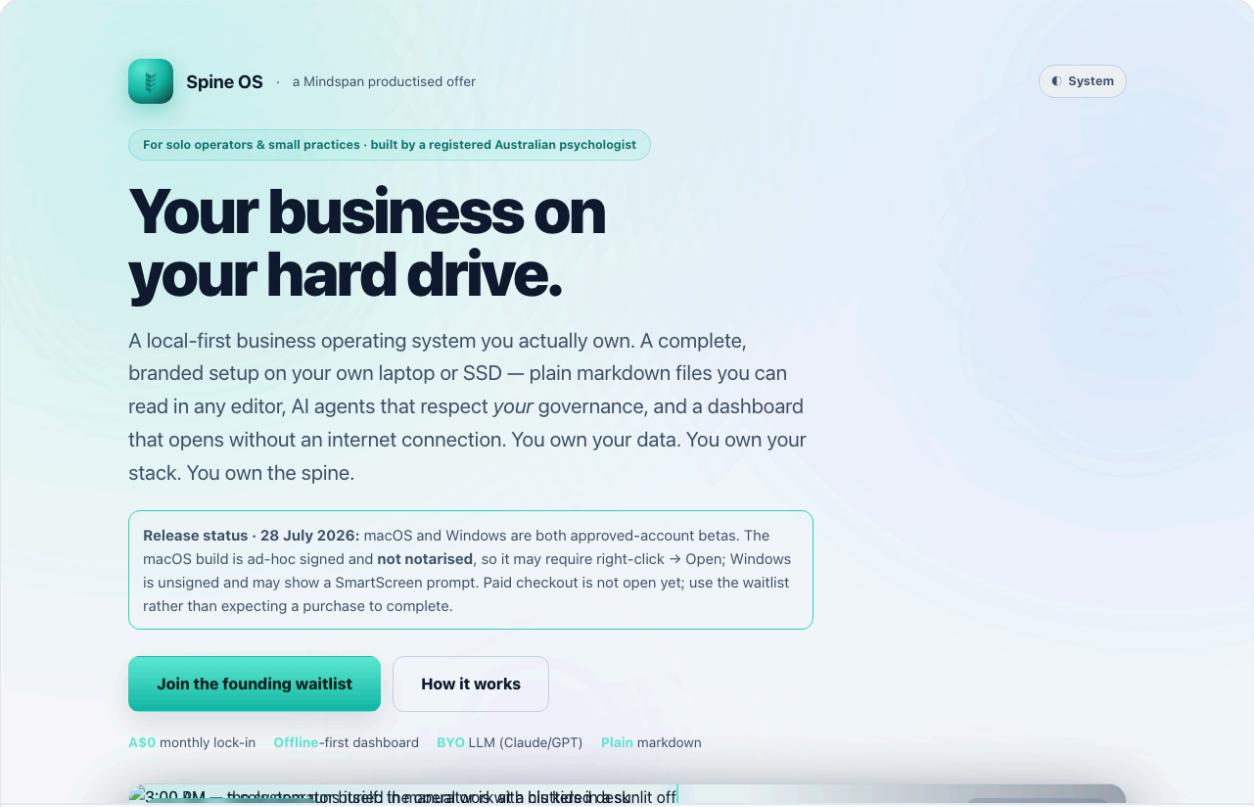

Your business on your hard drive. About fifteen minutes, start to finish — and everything stays on your machine.

START HERE

https://spine-os.mindspan.com.au/kit

1 Scan or open the link

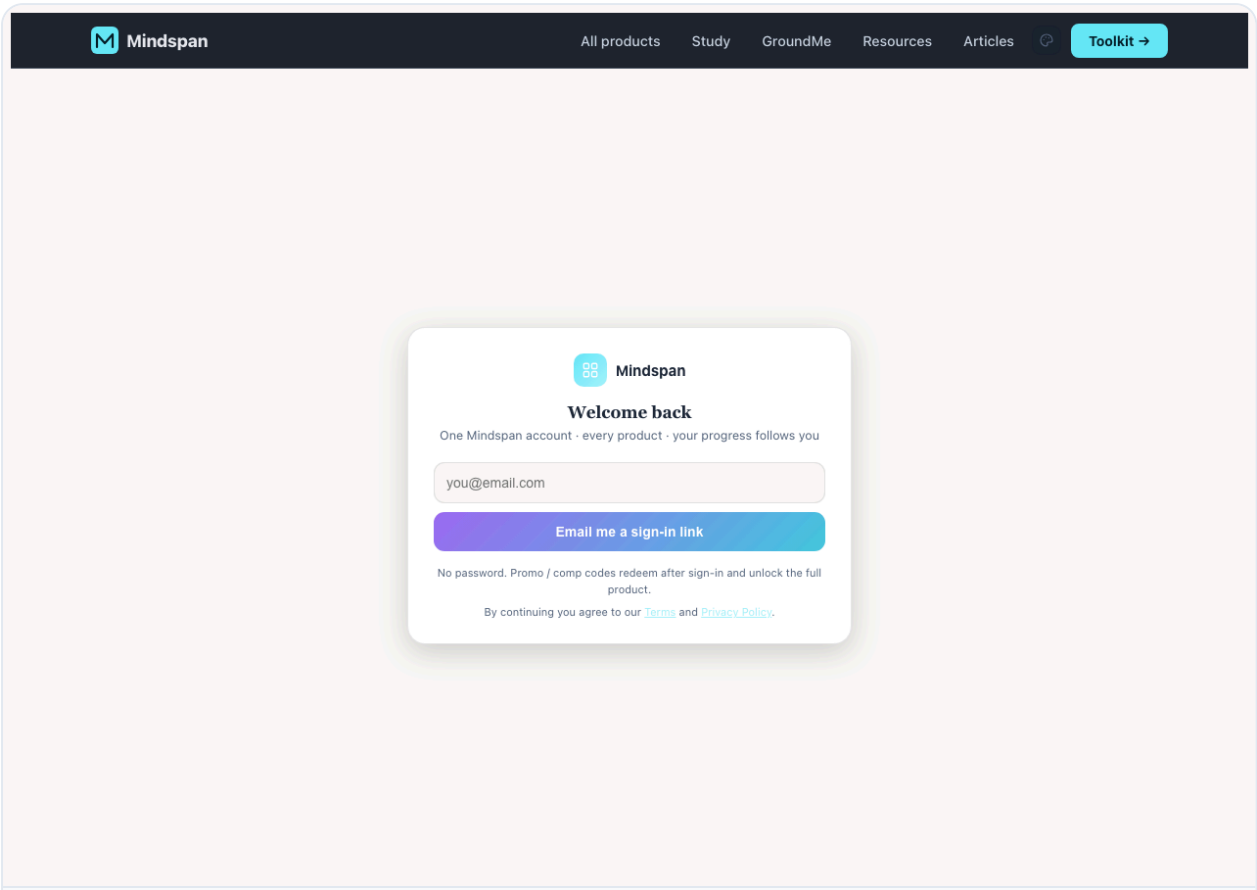

Point your phone camera at the code on the cover, or type it into your browser. This is the only address you need.

The Spine OS page

2 Sign in

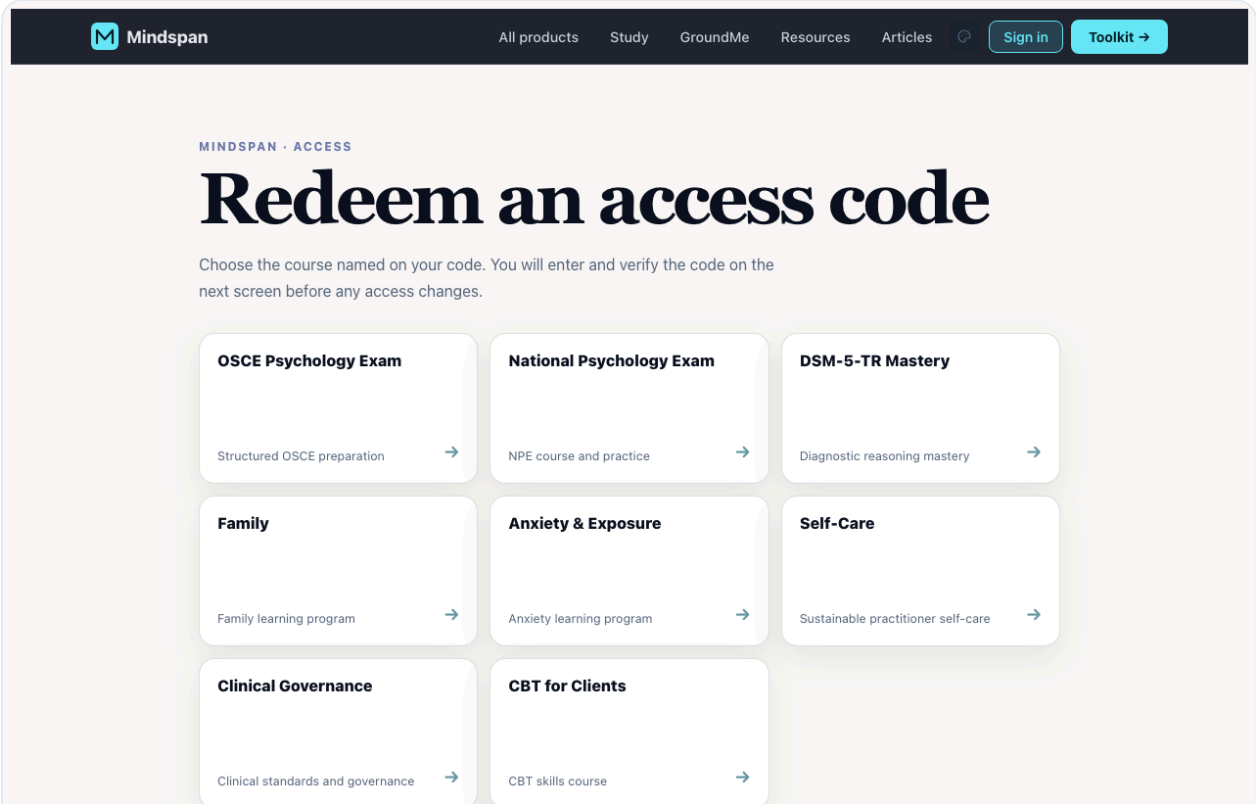

Enter your email. We send you a link — there is no password to remember or lose.

Sign in with your email

3 Enter your code

Your code is `SPINEOS-BETA-2026`. Enter it once, and the Kit is yours.

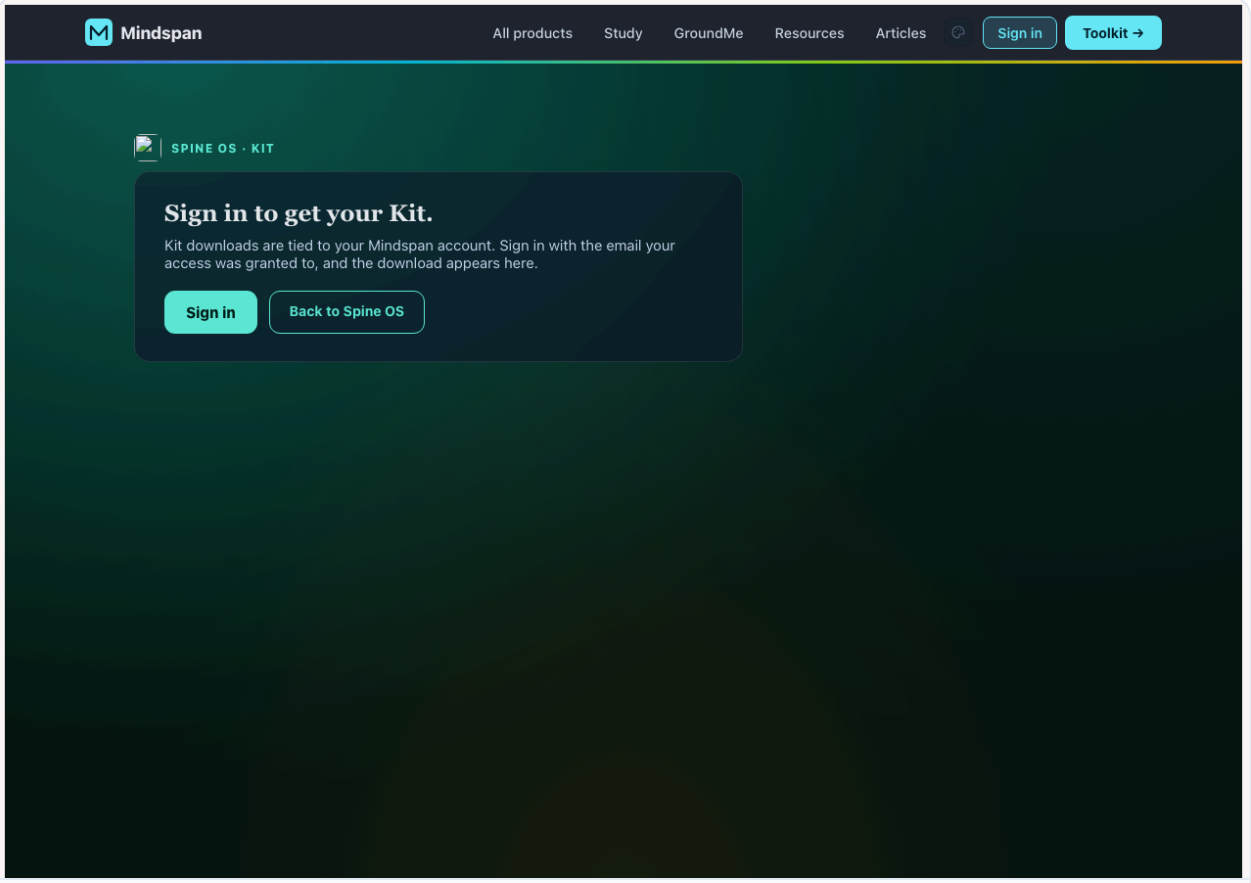

Where your code goes

> **Sign in first.** Your code is tied to your account, so entering it before you sign in won't work — and won't be used up either.

4 Download

Choose your platform. The file is small and downloads in seconds.

The download page before you sign in

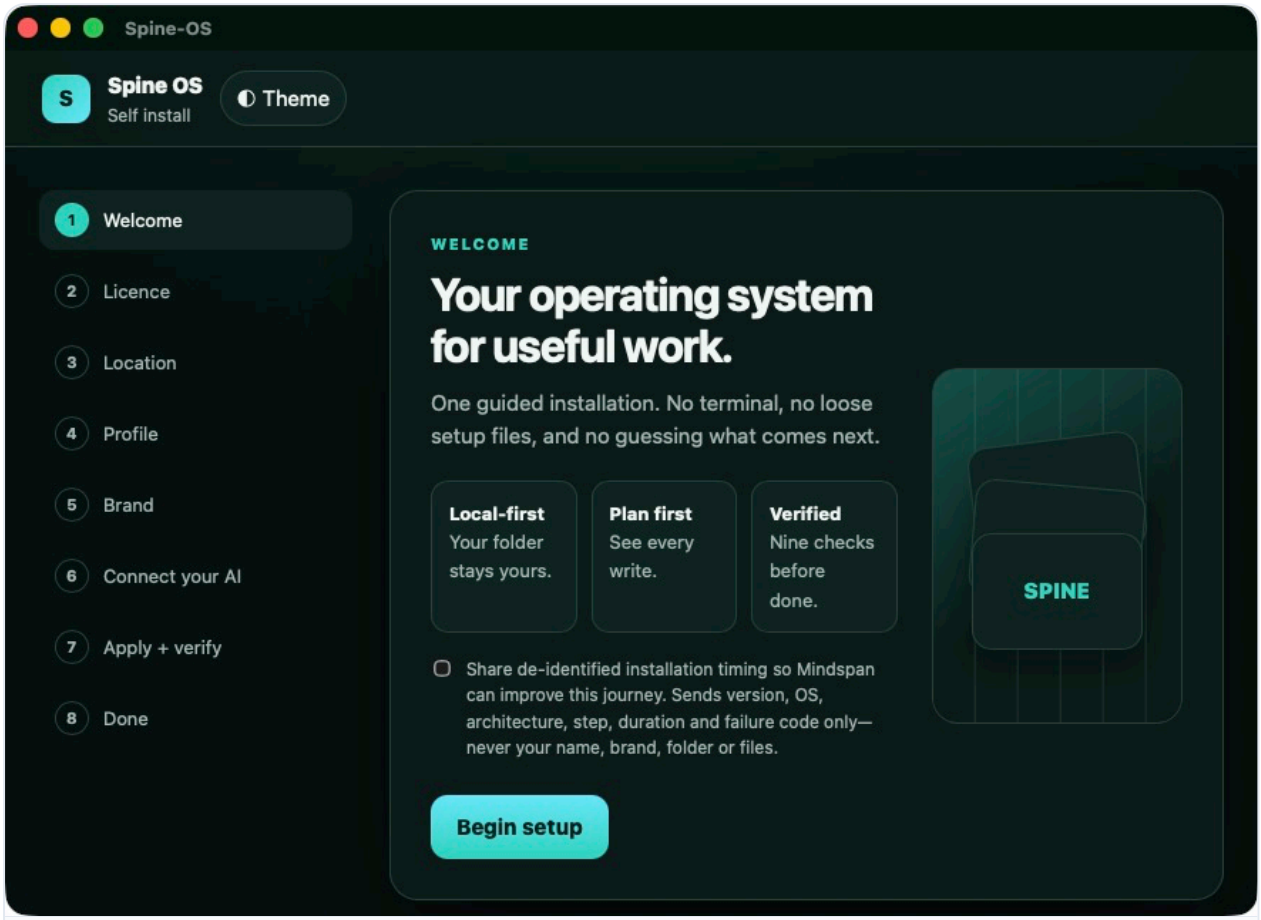

> **Windows:** before you unzip, right-click the file → Properties → tick **Unblock** → OK.

5 Open the installer

Your computer may warn you that the app is from an unidentified developer. On Windows choose **More info → Run anyway**; on Mac use **right-click → Open**. That's expected — the signing certificate is still in progress.

6 Accept the licence

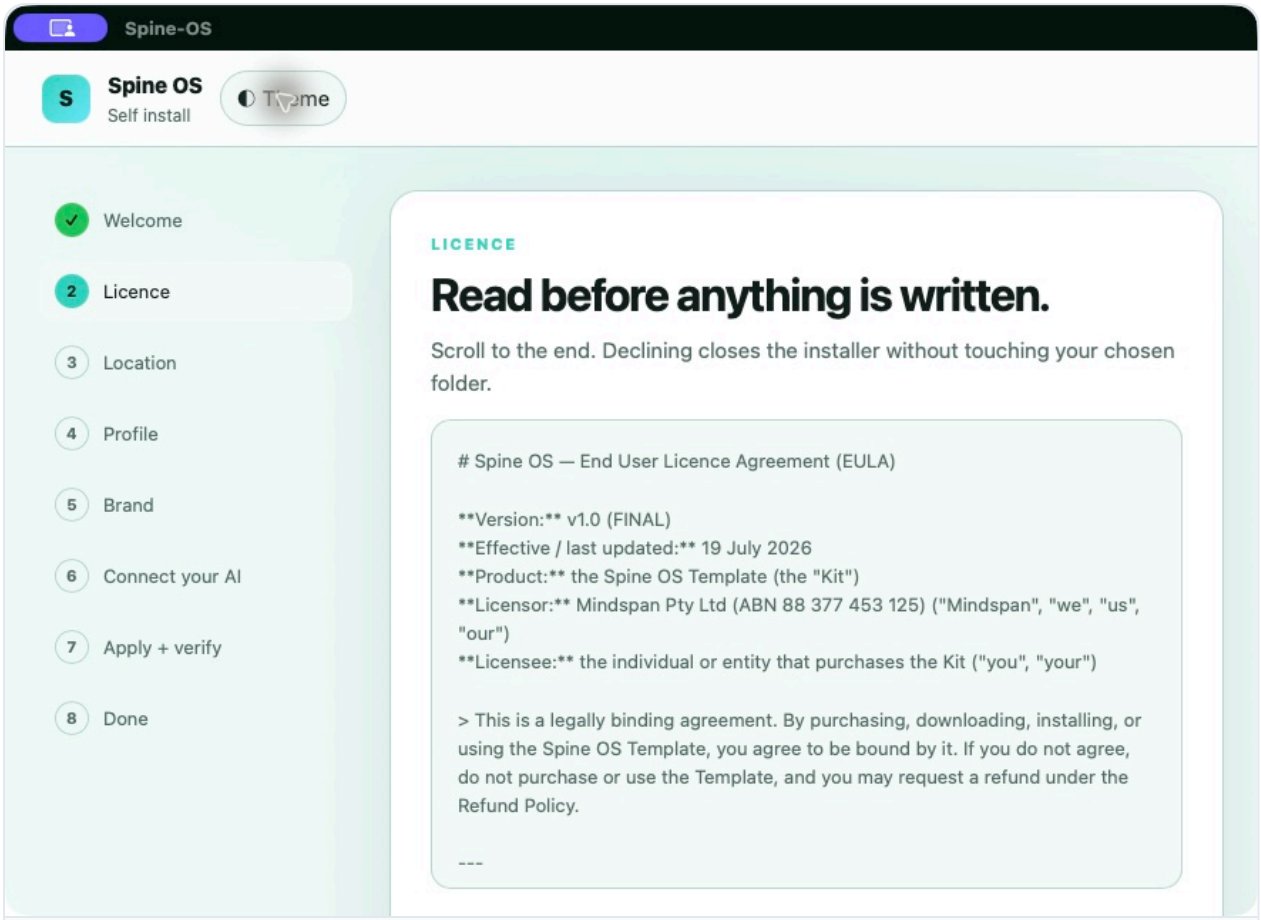

Read it and accept. This is recorded on your machine only.

Welcome

7 Choose where it lives

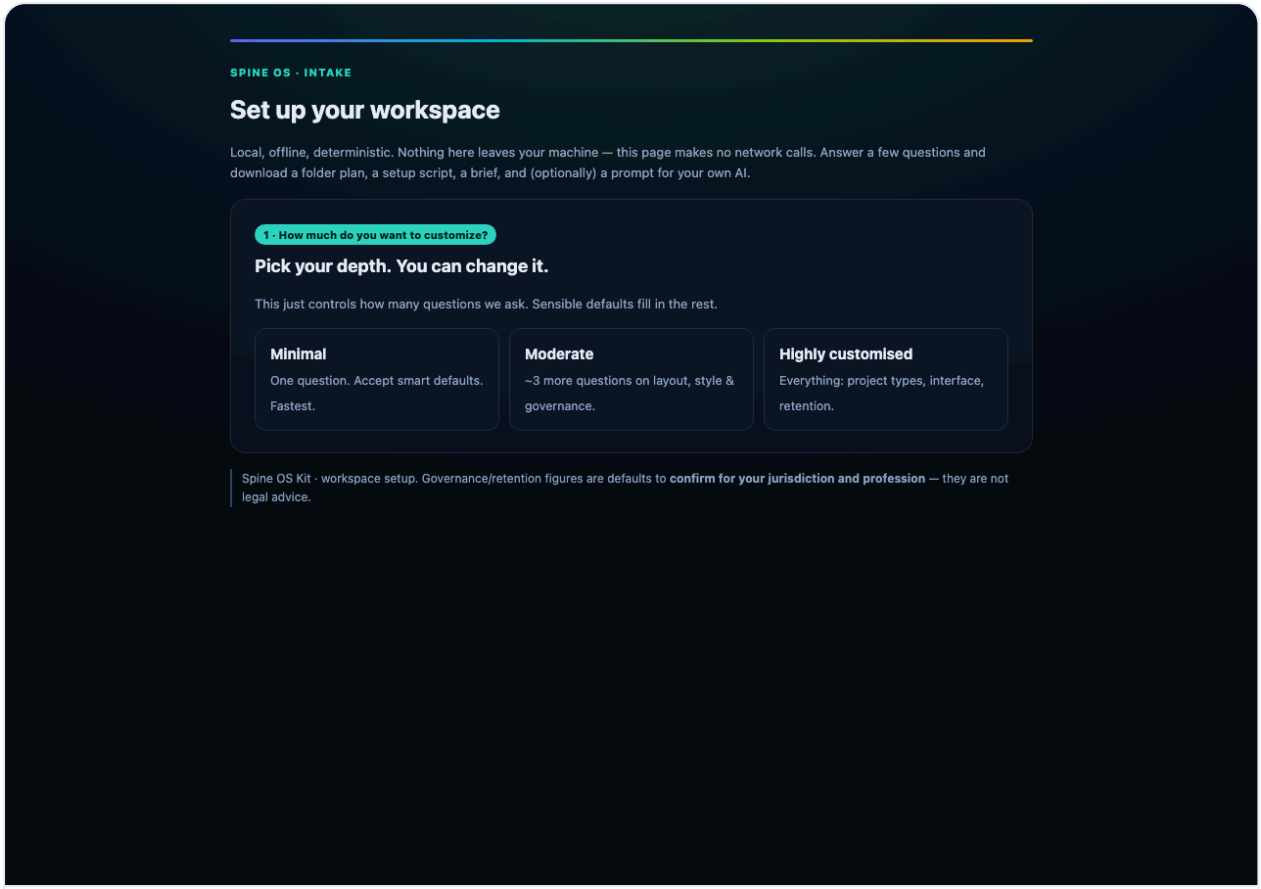

Your Documents folder is perfect. Nothing outside the folder you choose is ever touched — no administrator rights needed.

The licence step

8 Set up your workspace

A few plain questions — how you work, how organised you want it, how strict the governance should be. Change any of it later.

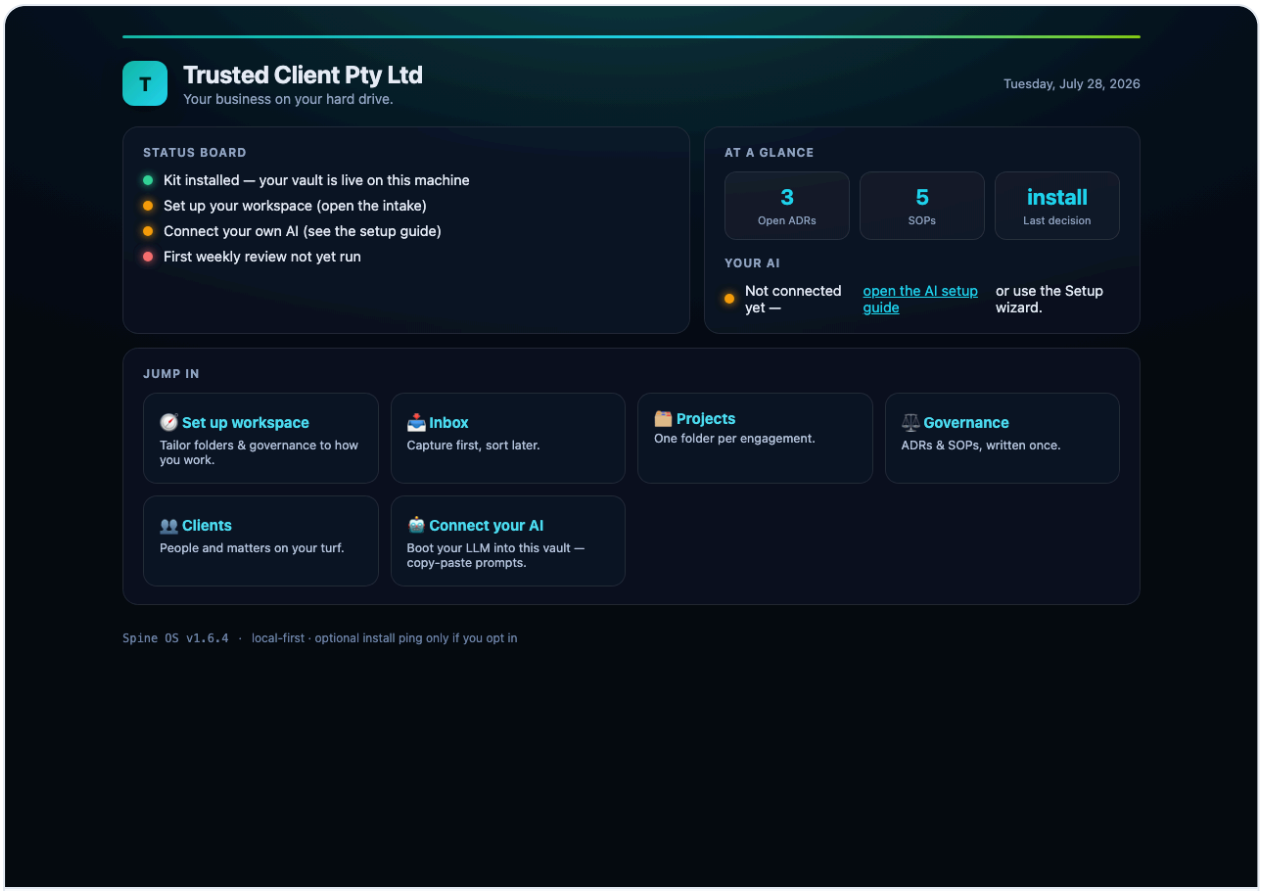

Setting up your workspace

9 Connect your AI

Point Claude, ChatGPT or another assistant at your folder. Your files stay on your machine; your assistant reads them where they are.

10 You're done

Your dashboard opens. That folder is yours — plain files you own, readable without us, forever.

Your dashboard

> **Nothing is uploaded.** If you opted in, we receive only that the install worked, plus your operating system version. No names, no file paths, no content.
